Business Question:

revenue trend over months in 2025 in millions

Generated SQL Query:

```
SELECT FORMAT(payment_date, 'yyyy-MM') AS month, CAST(SUM(payment_amount) / 1000000.0
AS DECIMAL(10, 2)) AS revenue_in_millions FROM payments WHERE YEAR(payment_date) = 2025
AND payment_status = 'Paid' GROUP BY FORMAT(payment_date, 'yyyy-MM') ORDER BY month
```

AI Business Insights:

Key Business Insights on 2025 Monthly Revenue Trend (in millions):

- **Overall Trend:** Revenue shows significant fluctuations month-to-month without a clear upward or downward trajectory throughout 2025.

- **High Points:** Peaks observed in January (1.29M), June (1.30M), and September (1.32M), indicating strong performance periods potentially linked to seasonal factors or successful campaigns.

- **Low Points:** July records a notable revenue dip at 0.42M, less than half of surrounding months, marking a significant anomaly requiring further investigation.

- **Mid-Range Stability:** Several months (February, March, May, August, October, November, December) range between 0.79M and 0.97M, suggesting a moderate baseline revenue level.

- **Comparison:** The highest monthly revenue (September, 1.32M) is over three times the lowest (July, 0.42M), indicating considerable variability that may impact forecasting accuracy.

Management Consideration: Address the July revenue anomaly and explore drivers behind peak months to leverage growth opportunities and stabilize underperforming periods.
